About Pharmapex's Human Pharmaceuticals Department:

Pharmapex's Human Pharmaceuticals Department (HPD) is a leading source for high-quality Active Pharmaceutical Ingredients (APIs) and Finished Pharmaceutical Products (FPPs) in various markets across the globe. With an extensive product portfolio, our consortium of companies is dedicated to addressing and solving the most important medical needs of our time, including oncology (e.g., multiple myeloma and prostate cancer), neuroscience (e.g., schizophrenia, dementia and pain), infectious disease (e.g., HIV/AIDS, Hepatitis C and tuberculosis), and cardiovascular and metabolic diseases (e.g., diabetes). Driven by our commitment to patients, we develop sustainable, integrated healthcare solutions by working side-by-side with healthcare stakeholders, based on partnerships of trust and transparency.

HPD offers a rich portfolio of hundreds of active pharmaceutical ingredients (APIs) with superior quality, excellent customer service and unparalleled IP assets. Our profound partnership and investment in research & development generates a steady flow of APIs, enabling a timely introduction of products to the market. Understanding the dynamics of the cost conscious market, about half of this R&D is dedicated to cost reduction through process efficiency and automation, enabling our customers to remain competitive in the marketplace.

We continuously endeavor to provide our clients with the newest APIs for ongoing research and product development efforts as well as commercial production. Our products include a diverse array of APIs manufactured in facilities that comply with Good Manufacturing Practices (GMPs) and are approved by US-FDA. Through years, we have also received the approval of other pharmaceutical regulatory agencies such as Australia TGA, German Health Authority Hamburg, Cofepis Mexico, and Korea Health Authority.

HPD constantly aims to provide the highest technical support and full regulatory documentation, such as US-DMF/TDP/ CTD/E-DMF/CEP, even for the most recently approved APIs originating from our US-FDA approved production facilities. Many of our APIs are suitable for Paragraph IV challenges/early launch in regulated markets as they are manufactured via non-infringing routes of synthesis.
